PROJECT DETAILS:

Title: soft computing technique based unit commitment problem in deregulated power system

Abstract: Soft computing technique based unit commitment problem in deregulated power system has a different objective than traditional unit commitment. This paper presents an Artificial Bee Colony (ABC) algorithm, to solve the profit-based unit commitment problem with emission limitations. The proposed approach is investigated on ten units 24 hour (IEEE 30 bus) test system and numerical results are tabulated. Simulation results shows that this approach effectively maximize the power generation companies profit when compared with existing methods.
